Burndown Chart. (Screenshot 4)

Reflection Questions:

1. Did your estimations reflect the actual effort?

On an overall sense the estimations reflected the actual effort but since this was a simulation the time taken to complete the sprint was very quick as this simulation was for demonstration purposes.

2. Was your backlog well-prioritized?

Yes, critical requirements were given the highest priority while important functional requirements were given high priority. Other tasks were given a medium priority.

3. How did your simulated sprint align with your plan?

The sprint mostly aligned with the plan, most of the highest priority tasks were performed in the sprint so that it can be validated with the user and iterated over later.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed the reduction in remaining work during the sprint and helped us understand the team's capacity, progress, and whether the planned work could be completed on time.
